

HALO

Installation Instructions for L-941 Halo-2 Live End Connector USE ONLY WITH HALO L-640 SERIES TRACK SYSTEM ONLY

NOTE: Halo-2 connectors will fit only Halo-2 Power-Trac. All Halo-2 Power-Trac is shipped from the factory with a "Left" dead end installed.
The L-941 is a "right" handed connector and will fit directly into the open end of the track as shipped from the factory.

Step 1. Align arrow on connector end with polarity groove on track section. Insert the connector into the open end of the track and push fully into place (See Fig. 1).

Step 2. Secure by tightening screw at the tip of the connector until snug. Do not over tighten since this may distort the track (See Fig. 2).

Step 3. If used as power supply connection point, remove plastic cover, pull wires into live end connector and attach "HOT" wires to terminals marked "1" and "2". Attach neutral wire to "NEUT" terminal. Finally attach ground wire to green ground screw marked "GND" \neq provided on back plate (See Fig. 3).
