# Highlights

#### Learn about light

Color temperature: light can have different color temperatures, indicated

in units called Kelvin (K). Bulbs with a low Kelvin value produce a warm, more tranquil light, while those with a higher Kelvin value produce a cool, more energizing light. CRI: the color rendering index (CRI) is used to describe the effect of a light source on color appearance. Natural sunlight has a CRI of 100. The CRI of Philips LED light bulbs is always higher than 80, which ensures colors are shown as true and natural.

#### Replaces standard incandescent

With its beautiful design and familiar shape, this energy-saving LED bulb is the perfect sustainable replacement for traditional incandescent bulbs.

#### Saving up to 90% energy

LED technology saves up to 90% energy compared to your standard bulb. It therefore pays for itself and saves you money year after year. It also helps protect the environment.
