

Brasov City

Brasov, Romania

For both the projects in Braşov, Flash Lighting Services implemented the possibility of creating different light scenarios and marking important events through telemanagement, as well as reducing electricity consumption. They replaced metal halide projector luminaires with new LED luminaires.

Volumetric letters

For lighting the volumetric letters, they used 12 Color Kinetics ColorReach Compact Powercore RGBW/RGBA projectors, two on every letter, and 36 Color Kinetics ColorBlast RGBA/RGBW Powercore projectors with DMX command.

Brasov City hall

The lighting of Brasov City Hall was made on two representative facades with the help of 60 Color Blast RGBW projectors – 6 x 10 poles placed specially to ensure independent mapping of building volumes so that they can be lit in different colors without mixing.
