

Capital Bank

Panama City, Panama

Owners of Capital Bank in Panama City were not satisfied with the building's previous illumination project. They were also looking for a way to make the building more visible on a main street, located in Panama's financial district.

Finding a solution

The client turned to Signify for a new lighting solution. This was accomplished by combining Color Kinetics iColor Flex LMX gen2 (now specified with Flex Compact gen3, RGB) luminaires with a Light System Manager gen5 controller, and installing Interact Landmark to enable remote management of the light shows.

A spectacle

It was important that the project be completed by the Panamanian National Holidays during the first week of November.

Now, with the lighting installation ready before the national celebration, the Capital Bank provides a stunning light spectacle, making it visible even from far away.
