

# Cathay Fortune Corp.

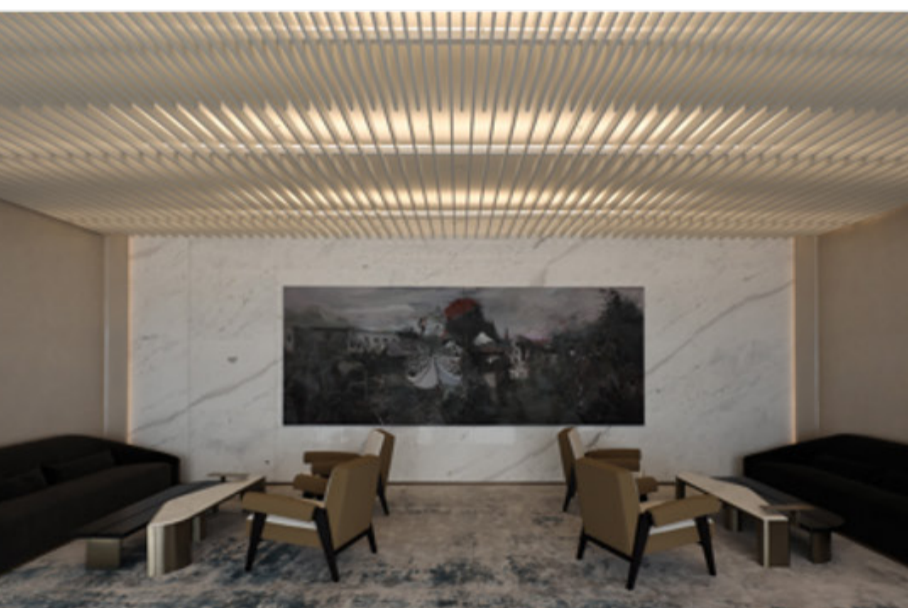

Shanghai, China

## Showing culture

Signify provided a customized connected lighting solution for the leading PE investment company Cathay Fortune Corp (CFC)'s headquarter in Shanghai. The building possesses complex and diverse space partitions and sticks to high requirements of intelligent control.

Philips Dynalite controls and a DALI-based digital dimming system provided operators with pre-set lighting scene to address the diverse needs of ambient lighting of different spaces like office, conference rooms, and catering spaces. This allowed the intelligent adjustment of color temperature and illuminance as well as interconnected control of curtains, while maintaining the consistency in lighting between different spaces.

In addition, the healthy lighting concept of the WELL Building Standard has been well-addressed in this project. The lighting design largely applies light diffusion techniques and innovatively leverages indirect linear strips installed on the ceiling to aid diffuse lighting and offer larger expanses of continuous and ideal illumination. This results in improved aesthetics and occupant comfort, and ultimately creates a smart, green, and healthy building for CFC.

## Project details

### Project team

CSI: Shanghai Pu'en Lighting  
Sales: Xin Zhang  
System Expert: Lim Li  
LiAS: Ada Jin  
LiAS: Emily Gu
