

Hammerson House

London, UK

Lighting controls

Hammerson House was founded in 1961 by Sue Hammerson CBE in memory of her late husband, Lewis Hammerson. It is a residential care home for the elderly, and is home to 116 residents. In 2018, the original house was demolished to make way for the new, modern and innovative home.

The project objective was to supply brand new lighting controls to the new build. Philips Dynalite lighting controls provide full emergency monitoring and reporting throughout the entire building. The outcome was a fully working system with great feedback.
