

Saitama Super Arena

Saitama, Japan

With a maximum capacity of 36,500 spectators, the multi-purpose Saitama Super Arena is the second largest indoor arena in the world.

A celebration

To mark the venue's 20th anniversary in 2020, and to heighten its status as an area landmark that hosts some of the world's most prestigious sporting events, the client decided to upgrade the arena's conventional fixtures. It now boasts dynamic, color-changing LED lighting that can be altered at any time and from any location to reflect the current sporting event.

High quality

Saitama Super Arena selected a comprehensive Color Kinetics and Interact Landmark lighting solution due to the high-quality and innovative color-changing capabilities provided by the system, as well as fast response time.

The project has been **expertly delivered** by the team at CKJ. To further **commemorate the event**, the client created the "Let's color you" lottery, wherein visitors could **post a photo of the illuminated arena on social media** with a designated hashtag in return for a chance to **win a gift.**"
